Q: hibernate search and theoretical query required I am using Hibernate Search to create a Lucene query. I am using JPA and I am aware of JPA annotations but I wanted to create my own criteria API if possible. My problem comes when I want to run a query using a Theoretical database. To do so, I create a PQuery, and a BandWidthFilterQuery. The PQuery is querying on the table itself. When I call the entitiesManager.createQuery(contentQuery), the pQuery is 570a42141b
