The technical skill level necessary to use Photoshop varies greatly depending on the experience of the user. If you're considering using Photoshop in your graphic design, it's important to know the various tools and to learn how they function. Understanding how to work in Photoshop involves knowing the interface. Here, I take a look at working with Photoshop's common controls. Opening a new Photoshop document The first step when working in Photoshop is to create a new document. You can open a document by double-clicking in the Photoshop window. If you're looking at an image and want to add a new layer, for example, you could double-click on the new layer. Sometimes Photoshop will open a new file with the document shown in Figure 6-1. This is the most common setting to use when you open a new document and it's the setting I use in my work. You see other locations for new documents in many tutorials and books because these other places, such as new images and web pages, are more common for the tutorial to be on. Photoshop works by placing several image layers on top of each other to create an image. You can tell when a file has one or more layers because the image looks different and the layer order changes. **Figure 6-1:** The first Photoshop document I open every time. When you open a new Photoshop document, you are presented with the Document Setup dialog box (see Figure 6-2). The default settings for a new Photoshop document are all the same, so just keep clicking OK until you get the window with the settings that make the most sense to you. In the upper-right corner of the Document Setup dialog box is an X icon. Clicking this icon opens the main Photoshop window so that you can do your work. (Later in this chapter, "Creating and Applying Basic Layers" describes how to work with layers and the layered Photoshop documents. In Chapter 16, "Understanding Photoshop Layers," I take a look at the layers in Photoshop and what you can do with layers.) **Figure 6-2:** Create a new document with Photoshop's settings or modify the document's settings.
